

Important questions of DAA

Unit 1

- 1) Define algorithm. State the criteria that the algorithm should satisfy.
- 2) what are randomised algorithms.
- 3) describe union operation and find operation.
- 4) spanning trees and asymmetric rotation.
- 5) DFS and BFS.
- 6) performance analysis (Time and space).

Unit 2

- 1) Merge sort, Quick sort, Binary search.
- 2) Explain the traversal techniques.
- 3) Explain minimum cost spanning trees.
- 4) Explain greedy method.
- 5) Job sequencing with deadline.

Unit 3

- 1) Multistage graphs.
- 2) Shortest paths.
- 3) Optimal binary search trees.
- 4) Travelling sales man.

Unit 4

- 1) 8 - Queen problem.
- 2) Hamilton Cycle.
- 3) knapsack problem.
- 4) FIFO branch and bound.

Unit 5

- 1) Cook's theorem.
- 2) String matching applications and explanation.
- 3) Naive string matching algorithm.
- 4) Robin - karp algorithm.
- 5) Knuth morse's Automata.
